

Agent Instructions - Remove Buying Buddy JS Version

Who this is for: Clients who built their site with **HighLevel AI Studio** and originally installed Buying Buddy using the JavaScript plugin `<script>` plus HTML `<bb-widget>` elements — and now want to **completely remove Buying Buddy** from the site. This prompt removes the old plugin block, the foundation pages, the disclaimer, and any other Buying Buddy widgets. It does **not** install anything new.

If you want to reinstall cleanly with the new package after removing the old one: run this Removal prompt first, then use the **Install prompt** from your Buying Buddy dashboard (the "Get the AI prompt for Step-1" button on the Add Plugin tab).

If you have created many widgets that you do not want to have deleted - then do not delete, migrate to the new package instead (keep your site's widgets working, just on the new `@buyingbuddy/react` package): stop and use the **Migration prompt** instead.

No Buying Buddy dashboard prep is required — this prompt only deletes things from your AI Studio project.
